

## Fundamentals Of Data Structures in C, 2nd Ed. Errata

Positive line numbers are from the top of a page, negative numbers are from the page bottom.

1. Change all typedef declarations of the form  
`typedef struct typeName {...};`  
  
to  
`typedef struct {...} typeName;`
2. Page 40, first else clause. The assignment to `j` may be changed to `j = column`. Note that the current code is correct as is. The change improves readability.
3. Page 79, lines -9 and -8. `rowTerms` should be 2 1 2 2 0 1 and `startingPos` should be 1 3 4 6 8 8 as shown in Figure 2.5(b).
4. Page 288, Fig 6.21. `low(1)` should be 0 and `low(7)` should be 5.
